Moving to an apartment in Viena, but the Heizkosten price provided by the landlord seems way off. Am I being scammed or am I not reading this right?

also ME...

OK

## WHAT TO EXPECT?

- Almost 100 % renewable energy sources for heating and cooling.
- By 2040, centralized district heating has been decarbonized and is powered by renewable energy sources and waste heat.
- Vienna will be mainly heated and cooled with decarbonized district heating and heat pumps.
- Decarbonized district heating will require more electricity to function.
- The costs of transformation were equitably distributed across the various social groups; **in 2040, all inhabitants of Vienna benefit from lower and more stable energy costs** on a permanent basis.

Hopefully...
